

## **E-Woo Uni-3D Pano/CBCT 5x5**

*By Dr. Jack Fletcher, Family Dentist*

This amazing machine takes the clearest digital radiographic images I have ever seen, and, better yet, it takes the images at very low radiation levels. This machine will take a variety of panoramic radiographs that can go “ear to ear”, or concentrate on a specific area of interest, further reducing the patient’s radiation exposure. The lateral cephalometric images (used in orthodontics) are without peer – they are extremely clear, and easy to read. This machine will also take a small volume, low radiation cone beam computed tomography image – also know as Cat Scan or CBVT. These images are wonderfully helpful when evaluating difficult root canal treatments, TMJ problems, and dental implant or oral surgery planning. We offer this service to other offices and can send most images electronically.
